

SAFEWALLET (SLT) WHITEPAPER

Introduction

SafeWallet is the fastest growing crypto currency of its type awarding holders in \$CAKE . DeFi tokens (Decentralized Finance Tokens) are financial applications that run on Blockchains and mirror concepts that have been successfully used in traditional banking And finance. The key idea is to recreate financial services in a decentralized way without a Third party, such as a bank,intervening. Instead, trust is placed in written code (Smart Contract) that is deployed on a blockchain network and allows interest to be earned, loans To be obtained or (synthetic) assets to be traded, and more, without relying on a third party. SafeWallet is Yield Generation token to reward its holders in Cake. It is establishing a new standard in DeFi Tokenomics with its innovative and game-changing Token distribution strategy. SafeWallet is intended to be held, but it benefits investors during periods of anticipated cryptocurrency volatility. With a tax system that is the same inside and outside the country, all price actions will result in the same rewards.

Abstract

SafeWallet token is the cryptocurrency that rewards its users in \$CAKE, This single feature is so important that it makes SafeWallet token a front runner among all the cryptocurrencies. With its anti-Whale system,

SafeWallet token discourages whales by limiting the sale amount to a maximum of 0.3% of the circulating supply. Holders of SafeWallet token get rewarded in CAKE. With every transaction, a small percentage of tokens are automatically transferred to the Pancake Swap Liquidity Pool. SafeWallet also maintains a buyback reserve from where the tokens are converted into BNB and securely locked and

stored in the SafeWallet contract. The Moonshot buyback and Auto Boost buyback systems work to maintain the smooth flow. It will be used as a key element in utilities. SafeWallet Ecosystem has an active NFT marketplace to buy and sell NFTs and dApps Dashboard to view and monitor earned prices. Main feature is decentralized wallet (SafeWallet), subscription platform, play to

earn games, staking pools, swap exchange, etc., are also provided to make the platform fun and easy to earn steadily.

The SafeWallet Protocol

On the Binance Smart Chain (BSC), SafeWallet token is the next generation of the reflection token and Cake reflection token to optimize user's profits both now and in the future. Simply by holding \$SLT tokens, users will receive an 5 percent return in \$CAKE for each transaction, which will automatically be transferred to the wallet in every 60 minutes. SafeWallet token has a total supply of 1,000,000,000 \$SLT. Out of the total \$SLT tokens, 4.8% will be transferred to pre-sale and initial liquidity. Further, 10% of tokens are sent to the burn address, 5% to the founders and the team, and finally, 2% of the total initial tokens are airdropped. 5% of every buy/sell is redistributed to all holders in CAKE, which is auto paid every 60 Minutes 2% of every transaction is transferred into Liquidity Pool for Pancake swap to create a stable price floor 3% of every transaction is transferred into Smart Contract for Strategic Buy Back Reserve

Security

Safe Wallet provides a powerful, in-demand service that allows users to reduce efforts spent on managing crypto assets and renders it transparent and trustless. To make our platform even more convenient and beneficial for users, the Safe Wallet team utilizes best UI security practices thus facilitating use of our platform's functionality to the full range.

On the Binance Smart Chain (BSC), SafeWallet token is the next generation of the reflection token: CAKE reflection token to optimize user's profits both now and in the future. Simply by holding \$ tokens, users will receive 5 percent return in CAKE for each transaction, which will automatically be transferred to the wallet every in 60 minutes.

Community

SafeWallet token is one of the fastest-growing and most beloved communities in cryptocurrency. We believe that community is essential, and SafeWallet token tries to involve people from all around the world. We have specialized telegram channels for our foreign community.

Longevity

SafeWallet token is here to stay. The decentralized community encourages and embraces long term ecosystem and foundation development to generate genuine use cases and hire benefits than any ephemeral fad.

Safe Token

Safe Wallet will issue own token, called the SLT (Safe Wallet Token). A strict limit of 1Billion .. SLT will be created, never to be increased. SLT will run natively on the Binance Smart Blockchain with BEP20.

Type: BEP20 Token

Ticker: SLT

Full name: Safe Wallet Token Decimals: 6

Total supply : 1,000,000,000 SLT

Open Contract Source Code

Token economy and premises to following price growth is described in a special charter.

Ecosystem

NFT lending

The world's first decentralized marketplace for facilitating NFT and DeFi liquidity. SafeWallet token marketplace, which is based on BSC, will enable NFT owners to simply borrow against their NFTs as collateral at market rates without selling them. This implies users can make revenue from their NFTs rather than having them collect digital junk.

NFT market place

Users may purchase and sell NFTs on the platform, including those obtained via the NFT Lending platform's liquidated collateral. This creates an unusually competitive market for buying NFTs at a discount to their standard market value. Additionally, the marketplace features

a minting tool that enables users to create their own NFTs using images, videos, and other data.

Subscription platform

We are developing a content subscription platform to create utility for SafeWallet token where \$SLT can be used for purchasing content, tipping & messaging content creators on our content platform. Rewards in CAKE ensure that Curators can keep earning stable income without the need to sell their \$SLT holdings.

Staking Pools

By using a unique set of smart contracts for Staking Pools, SafeWallet token will be able to move part of liquidity to the Partnered Tokens by purchasing them on specific contract interactions, thus increasing the value of the Partnered Tokens. Participants in the Pool then get tokens in exchange for their contributions to the Pool. This idea provides the token with its long-term value since it allows to stake X tokens to gain Y tokens economically and mathematically sound.

Advantages

1. Receive crypto assets to the generated wallet
2. Import assets to the wallet using private keys of various formats
3. Store private keys in a securely encrypted environment
4. Send assets to other addresses
5. Select cryptocurrency node to use
6. Select blockchain explorer to use Aforestated wallet functionality will be built on the SPV (Simplified Payment Verification) technology. This allows customers to avoid prolonged blockchain synchronization The keys are stored in an encrypted manner on the

end-user device or a hardware wallet (eg. Ledger,Trezor, etc.) Keys can be backed up with the passphrase for all the listed currencies or with a string format key for each currency

Platforms

Safe Wallet team is focused on bringing truly decentralized experience to all the customers on all

The platforms. Safe Wallet technology is created with the idea of omni-channel product which

Customer can access from any device he\she has.

Anti-Whale System

Our contract counts with a simple, straightforward whale discouragement system: No sale amounts higher than 0.125% of the total supply are possible at once. Initially, it was at 0.25% but after 10% Tokens were burnt we have reduced it by 10%. This works as an indicator when a Whale is trying to sell their tokens to avoid price manipulation as well as discourages Swing Trading.

CAKE Reflection

Earn automatic **CAKE** rewards by holding your \$SLT token 5% of every buy and sell transaction is automatically redistributed to all token holders. You will receive the rewards automatically in your wallet or you can claim them manually in our dApp Dashboard available on the website. This effectively means that the native reflection of SafeWallet works in parallel with Stable Yield, generating a Compound Reflection effect and exponentially increasing your holdings.

Buyback Wallet

3% tokens are collected from every transaction and converted to BNB and are stored in Our contract. The wallet is known as Buyback Wallet. Which when enabled purchases \$SLT directly from exchanges and removes the purchased tokens permanently from circulating supply while simultaneously making green candles on the price chart.

Liquidity Pool

2% of every transaction is converted into liquidity for Pancake Swap. Pancake swap fixes the low liquidity problems of DEXs through the liquidity Pool mechanism. A liquidity pool always contains a pair of tokens, which you can trade. Our Smart contract deposits 2% from every buy/sell transaction as \$SLT and \$BNB into a liquidity pool. At the same time, 1% from every transaction is allocated to Marketing to fuel the most ambitious projects in our Ecosystem and reward the active community.

Road Map

March 2022

- Website & Community
- Whitepaper & Audit(Tech)
- SafeWallet Test Version release
- Presale on Pinksale & Launch

- Coingecko Coinmarketcap
- Huge marketing
- 200+ token assets support
- Bep20 token swaps
- Multi-language UI
- Web wallet
- Mobile wallet for Android
- Mobile wallet for iOS
- 8 new assets in the wallet
- 4 new assets in the atomic exchange

April 2022

- Listing in CEX (Hotbit , Gate.io , Bitmart)
- Crypto against fiat conversion options integration
- 8 new assets in the wallet
- NFT Subscription Platform
- SLT Racing Game
- NFT Lending Platform
- Custom nodes and block explorers usage

May 2022

- User chat in the wallet (trollbox)

- Hardware wallet integration (Trezor, Ledger)
- 8 new assets in the wallet
- 4 new assets in the atomic exchange

June 2022

- dApps browser
- 8 new assets in the wallet

THANK YOU
